

firelight and Swiss Re Magnum

Automated Underwriting at the Point-of-Sale

FireLight integrates with Swiss Re's Magnum platform, offering an advanced automated underwriting at the point of sale for life insurance. Through web service calls using Magnum APIs and underwriting interview questions embedded in FireLight, this integration enables real-time underwriting decisions, speeding up sales and improving operational efficiency.

The underwriting data and decision retrieved from Magnum can be used within FireLight rules and messages and placed into the part 2 application for submission. A custom action button initiates the Magnum interview process and data flows to and from Magnum effortlessly, delivering rapid results and simplifying the sales process.

What is Swiss Re Magnum

Magnum is a cloud-based automated life insurance underwriting platform developed to reduce application times, speed up processing, improve experiences, and provide in-depth business insights to streamline operations.

Automated Underwriting Benefits

- Reduce or eliminate underwriting time
- Get a decision within minutes
- Increase speed to issuance
- Simplify the sales process for agents
- Reduce underwriting cost
- Eliminate errors with data driven analysis
- Free up traditional underwriting for more complex cases
- Improve client satisfaction and engagement
- Improve accuracy of risk assessments

Real-Time Underwriting to Drive Faster Sales

Carrier

Decrease underwriting cost and risk through automated data-driven analysis that eliminates human manual review and errors.

Agent

Reduce or eliminate underwriting time by incorporating the underwriting decision inside the e-application—returning a decision within minutes.

Client

Improve client satisfaction and engagement with streamlined, faster decisions and more personalized policies.
